

GY6 Finance Platform

A finance management system for the agency

Prepared for partner review

This overview summarises what the system will do, how it is being built, the planned phases of work, and the key decisions taken so far.

STATUS	DATE	AUDIENCE
For review	May 2026	GY6 partners

1 Purpose

GY6 is building a dedicated system to manage the agency's finances with the rigour of professional accounting software — not a spreadsheet or a basic expense tracker.

The aim is simple: every amount that moves through GY6 is recorded accurately, can never be quietly changed, and can be reported on with full confidence — for both partners, for tax, and for the long-term health of the business.

Why this matters:

- **Accuracy** — the books are designed to always balance.
- **Trust** — once financial records are finalised they cannot be edited or deleted; corrections are always made in the open.
- **Clarity** — at any moment, both partners can see where the money is and how profit is shared.
- **Longevity** — the system is built to handle years of activity without slowing down.

2 What the system does

- **Income tracking** — record every payment GY6 receives, organised by client and category.
- **Expense tracking** — record every cost, organised by vendor and category.
- **Accounts and balances** — track money across all of GY6's bank accounts, cash and digital wallets, with up-to-date balances.
- **Transfers** — move money between GY6's own accounts with a complete record of every movement.
- **Recurring renewals** — handle subscriptions and recurring charges automatically, so nothing is missed.
- **Profit distribution** — calculate and record each partner's share: Tashfeen 65%, Itmam 35%.
- **Locked statements** — once an accounting period is closed, its records are permanently sealed.
- **Downloadable statements** — produce professional financial statements as PDF and Excel files, ready to share or file.

3 How it is being built

The system is being engineered on the same principles used by serious accounting software:

- **Double-entry bookkeeping** — the proven method behind every professional accounting system. It makes errors structurally hard to introduce and keeps the books balanced at all times.
- **Permanent records** — financial entries are never overwritten. A mistake is corrected with a new, visible entry, exactly how a professional accountant works.
- **Full audit trail** — every action is logged: who did it, and when.
- **Built to scale** — the system stays fast whether GY6 has hundreds or hundreds of thousands of transactions.

In short, this is being built as financial infrastructure GY6 can depend on for years — not a quick internal tool.

4 Build roadmap

The work is structured into phases. Each phase delivers something complete and reliable before the next begins.

Phase	What it delivers
Phase 0	Foundations — project setup and the safeguards that protect financial data.
Phase 1	Accounting engine — the core that records and balances every transaction.
Phase 2	Day-to-day money — recording income, expenses, transfers and live account balances. <i>GY6 can begin using the system at this stage.</i>
Phase 3	Periods and statements — closing months, sealing records, and downloadable financial statements.
Phase 4	Recurring renewals — automating subscriptions and recurring charges.
Phase 5	Profit distribution — automating the 65 / 35 partner split.
Phase 6	Hardening — final performance, backup and security work for long-term use.

5 Rough timeline

The estimates below are indicative. Actual calendar time depends on development pace and review cycles.

Stage	Phases	Indicative effort
Foundations and accounting engine	0 – 1	about 3 – 4 weeks
Day-to-day money tracking	2	about 3 – 4 weeks
Periods and downloadable statements	3	about 3 – 4 weeks
Renewals and profit distribution	4 – 5	about 3 – 4 weeks
Hardening for long-term use	6	about 2 – 3 weeks

A working version — tracking real income, expenses and balances — is expected after the first two stages. The full feature set, including statements, renewals and automated profit distribution, follows from there.

6 Decisions locked in

These have been agreed, and the design is built around them:

- **Single currency** — all records are kept in one currency.
- **For GY6 only** — an internal system for the agency and its team, not a product sold to others.
- **Profit split** — Tashfeen 65%, Itmam 35%, paid through formal profit distributions.
- **Fresh start** — the system begins from current account balances; past history is not imported.
- **Calendar year** — the accounting year runs January to December.
- **Tax** — not included in the first build; the design leaves room to add it later without rework.

7 Decision still needed

One item is open for the partners to confirm before Phase 4:

Recurring renewals — should these cover money GY6 **pays out** (subscriptions, tools), money GY6 **receives** (recurring client fees), or **both**?

Any other priorities or requirements from Itmam are welcome before the build begins.

8 Next step

Once Itmam has reviewed this overview and the renewals question is settled, development begins with Phase 0 — Foundations. Progress will be shared phase by phase, with a working system to try from Phase 2 onward.
