

GY6 Finance Management System

Product Requirements Document (PRD)

1. Product Overview

Product Name

GY6 Finance Management System

Product Type

Internal financial operations and accounting platform

Product Owner

GY6 Leadership

Primary Stakeholders

- Tashfeen Zaman
 - Itmam Bashar
 - Angel Investor
 - Internal finance operators
-

2. Executive Summary

The GY6 Finance Management System is a full rebuild of the agency's internal finance infrastructure.

The current system is operational but suffers from:

- poor architecture
- poor scalability
- inefficient workflows
- messy bookkeeping implementation
- weak account management structure

The new platform will introduce:

- scalable accounting architecture
- double-entry bookkeeping
- immutable financial statements
- real-time financial analytics
- account balance management
- transfer systems
- downloadable bookkeeping reports
- recurring payment automation

The system will become the centralized financial operating platform for GY6.

3. Problem Statement

The existing finance database:

- combines income and expenses improperly
- lacks scalable structure
- makes bookkeeping difficult
- creates operational inefficiencies
- becomes harder to maintain as the agency scales
- has weak account linking architecture
- lacks proper accounting standards

The organization requires:

- a reliable finance system
 - cleaner workflows
 - scalable architecture
 - auditable financial records
 - simplified financial visibility
-

4. Goals & Objectives

Primary Goals

1. Replace Legacy System

Create a complete replacement for the current finance infrastructure.

2. Improve Scalability

Support long-term operational growth.

3. Improve Accounting Integrity

Implement proper bookkeeping architecture.

4. Improve Financial Visibility

Provide dashboards, statements, analytics, and reports.

5. Improve User Experience

Reduce stress and complexity during financial operations.

5. Success Metrics

The platform is successful if:

- income and expense tracking become fully separated
 - all transactions support double-entry bookkeeping
 - statement generation becomes automated
 - financial exports are generated reliably
 - account balances remain accurate
 - recurring payments become manageable
 - financial operations become faster and easier
 - dashboard analytics provide real-time visibility
-

6. Users & Personas

Leadership Users

Primary financial operators.

Needs:

- complete financial visibility
 - reliable bookkeeping
 - accurate balances
 - downloadable reports
 - scalable workflows
-

Internal Finance Operators

Handles transaction entry and management.

Needs:

- simple workflows
 - easy data entry
 - automation
 - status visibility
 - transaction tracking
-

7. Product Scope

IN SCOPE

Financial Management

- income tracking

- expense tracking
- recurring transactions
- account transfers
- balance adjustments

Bookkeeping

- double-entry accounting
- immutable statements
- transaction history

Analytics

- financial dashboard
- charts and graphs
- profit calculations
- account summaries

Reporting

- XLSX exports
- CSV exports
- downloadable statements

Security

- authentication
- access control
- audit logging

OUT OF SCOPE (Initial Version)

- payroll automation
- tax filing automation
- multi-currency support
- banking API integration
- invoicing engine
- client portal

- mobile app
-

8. Functional Requirements

FR-1 Income Management

The system shall:

- create income records
 - track payment progress
 - manage recurring income
 - support attachment uploads
 - automate status tracking
-

FR-2 Expense Management

The system shall:

- create expense records
 - categorize expenses
 - manage recurring expenses
 - support confirmations
 - support attachments
-

FR-3 Double-Entry Bookkeeping

The system shall:

- require linked debit and credit accounts
- update balances automatically
- maintain transaction integrity

FR-4 Account Management

The system shall:

- manage multiple account types
- display account transaction history
- support transfers
- support balance adjustments

FR-5 Statement Ledger

The system shall:

- generate immutable statement entries
- support filtering/searching
- support exports

FR-6 Dashboard Analytics

The system shall:

- display financial KPIs
- display charts and trends
- calculate net profit
- calculate profit distribution

FR-7 Transfer System

The system shall:

- support internal transfers

- support backdated transfers
 - update balances automatically
-

FR-8 Balance Adjustments

The system shall:

- support manual corrections
 - generate adjustment entries
 - preserve auditability
-

FR-9 Authentication & Security

The system shall:

- restrict unauthorized access
 - protect financial data
 - maintain audit logs
-

9. Non-Functional Requirements

Performance

- paginated data loading
 - optimized queries
 - responsive UI
-

Reliability

- transactional safety
 - rollback protection
 - immutable ledger integrity
-

Scalability

- modular architecture
 - maintainable services
 - extensible database structure
-

Security

- protected routes
 - secure authentication
 - audit logging
-

Usability

- simple UI
 - calm visual design
 - low cognitive load
-

10. Business Rules

BR-1 Income & Expense Separation

Income and expenses must remain in separate tables.

BR-2 Immutable Statements

Confirmed statement records cannot be directly edited.

BR-3 Double-Entry Required

All financial transactions require debit and credit accounts.

BR-4 Balance Safety

Balances must not silently go negative.

BR-5 Renewal Logic

Recurring renewals must not affect balances until confirmed.

BR-6 Statement Generation

Confirmation automatically creates statement entries.

11. User Flows

Income Flow

Create Income → Link Accounts → Save Draft → Confirm → Statement Created → Balances Updated

Expense Flow

Create Expense → Link Accounts → Save Draft → Confirm → Statement Created → Balances Updated

Transfer Flow

Select Accounts → Enter Amount → Confirm Transfer → Balances Update → Statement Generated

Adjustment Flow

Edit Balance → Difference Calculated → Adjustment Entry Created → Audit Log Generated

12. Dashboard Requirements

The dashboard must display:

- total income
- total expenses
- net profit
- account summaries
- profit distribution
- financial charts

Views:

- daily
 - monthly
 - yearly
-

13. Export Requirements

The system must support:

- XLSX export
- CSV export

Exports should include:

- statements
 - transactions
 - balances
 - categories
 - linked accounts
-

14. UI/UX Requirements

The interface must:

- feel modern
 - feel minimal
 - feel calm
 - avoid clutter
 - remain easy to scan
-

15. Risks & Considerations

Potential risks:

- accounting inconsistencies
- balance corruption
- duplicate confirmations
- failed transaction updates
- scalability bottlenecks

Mitigation:

- database transactions
 - audit logs
 - immutable statements
 - validation layers
-

16. Technical Constraints

- PostgreSQL required
 - Prisma required
 - React/Next.js required
 - TypeScript required
-

17. Acceptance Criteria

The product is complete when:

- all accounting flows work
 - balances remain accurate
 - statements are immutable
 - exports function correctly
 - dashboard metrics update correctly
 - transfers work safely
 - renewals function correctly
 - audit logs are generated
-

18. Final Vision

The GY6 Finance Management System will become the agency's centralized accounting and financial operations platform, replacing fragmented workflows with scalable, reliable, and accounting-safe infrastructure.
